## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

Paper No(s)/Mail Date. \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The structural limitations conveyed by "arrangement for allowing radiation" in claim 1 are unclear since the disclosure teaches an -- arrangement for causing radiation--.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

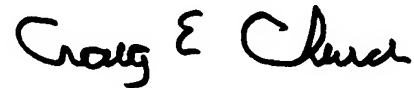

Claims 1-7 and 9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Morgan et al (4284895). Morgan teaches CT apparatus comprising first and second data acquisition systems each including a an x-ray source S and detector array R, a rotating gantry M (figures 7a and 7b) carrying the acquisition systems, control means 2 for alternately activating each source and its corresponding array so as to image a patient at the center of the gantry (lines 48-62 of column 5) and image computer C for processing data from the detector arrays. Lines 21-23 of page 13 of applicant's specification state that the invention may include three or more acquisition systems.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Morgan as above in view of Campbell (6208706). Morgan does not suggest controlling x-ray emission using diaphragms. Campbell discloses a CT scanner having x-ray sources 18a and 18b that are activated alternately as gantry 16 rotates. Lines 65-67 of column 5 reveal that the sources may be activated by way of mechanical shutter (diaphragm), and it would have been obvious to employ this technique in Morgan's scanner in order to avoid the need for high voltage switching which tends to be costly and cumbersome.
